ENZYMPLUS

ENZYME-BASED MICROBIOLOGICAL COMPLEX

ENZYMPLUS IS A MIXTURE OF BIOLOGICALLY ACTIVE AND SPECIFIC BACTERIA AND ENZYMES, USEFUL FOR THE REMEDIATION, TRANSFORMATION AND METABOLISATION OF ALL KINDS OF ORGANIC MATTER IN DIFFERENT BIOMASSES.

PREVENTS THE FORMATION OF BAD ODOURS RESULTING FROM ABNORMAL FERMENTATION, ACTS AS A DEGRADER OF ORGANIC MATTER IN GENERAL AND IS ACTIVE AGAINST THE MOST COMMON PATHOGENIC GERMS.

LITTER BOXES AND CAGES FOR SMALL ANIMALS:

(dogs, cats, small rodents in general, ferrets, squirrels, birds etc.) mix **Enzymplus** with the litter material at a rate of about 20 g per cage or kennel once or twice a week.

- Eliminates unpleasant odours from the litter box
- Eliminates flies, general insects, eggs and larvae
- Breaks down fungi and pathogenic bacteria in the litter box
- Keeps the litter box drier

WC, SINKS, SHOWERS, ETC: Distribute 2 teaspoons of **Enzymplus** in each affected drain 2-3 times a week, preferably in the evening. The following morning, flush the water. It eliminates unpleasant odours, scale generated by organic residues, clogging and bacterial contamination at source.

COMPOST, ORGANIC SUBSTANCES IN HEAPS: Wet the heap with water and distribute/mix **Enzymplus** in a ratio of approximately 50 g twice a week (per family of 4-5 elements) or 60/80 g for quintal of substance every 7/10 days. It acts as a biodegradator of organic waste, eliminating malodorous fumes and transforming the organic substance into an excellent agricultural soil conditioner.

SEPTIC TANKS, CESSPOOLS, SUMPS, CONDENSATE TANKS: Inoculate **Enzymplus** into the pits at a rate of approximately 30-40 g per week (per family of 4-5 elements) or 25/30 g per m³ every 7 days. If present, it is advisable to water the solid surface first. It eliminates and prevents the formation of incrustations and bad odours, saves on the drainage of the pits themselves, reactivates the purification cycles and keeps the internal collection system in perfect working order. Eliminates the presence of flies, insects in general, eggs and larvae.

PIGS AND COWS IN GENERAL: Spread **Enzymplus** on grids, cracks or litter box at a rate of about 10 g per m² every 7 days.

RABBITS AND BIRDS: Spread **Enzymplus** on the litter box at a rate of about 10 g per m² every 15 days.

ENZYMPLUS IS A TOTALLY ORGANIC PRODUCT THAT IS NON-TOXIC TO HUMANS AND ANIMALS

ENZYMPLUS DOES NOT INVOLVE ANY CONTRAINDICATIONS OR THE NEED FOR ANY PRECAUTIONS
