

A short introduction to

# **VIRGIN OIL PRESS LTD.**

The company is active in producing cold pressed oils, glutenfree seed flours, organic and natural products.

# MISSION

We are a young, energetic Hungarian team. Our firm's main goal is to produce **cold pressed vegetable oils in perfect quality.**

We produce our oils **without any additives or preservatives**, through cold pressing, a clean and **environmentally friendly** technology.

During cold pressing, we only use  
a **mechanical process** to extract the oils,

so that the precious content qualities  
of the seeds will **not be damaged**

and the unsaturated fatty acids and vitamins  
will not dissolve, but strengthen our health  
or nourish our skin.

Everything started  
with the **grape seed oil...**

First we pressed out the oil from grape seed...

.  
. .  
.

Then came the pumpkin seed, linseed,  
rosehip seed, poppy seed etc...

**Now we have 18 kinds of seed oil and powder.**

# OUR PHILOSOPHY

Thanks to our cold pressing technology, we use **no chemicals** during the production.

## **„ZERO WASTE” TECHNOLOGY**

means that we use **all the byproducts**, so there will be no waste at all.

**We press from the natural, dried seeds,** therefore our products perfectly preserve all the original components.

# THE RESIDUES

The oilseed-pressing residues, the pellets can be ground easily due to their low oil content and have the same **positive physiological effects** as the oils do. They also have high mineral and protein content.

This material, therefore, is **excellent for bakery products**. Not to mention that our plant flours are **glutenfree!**

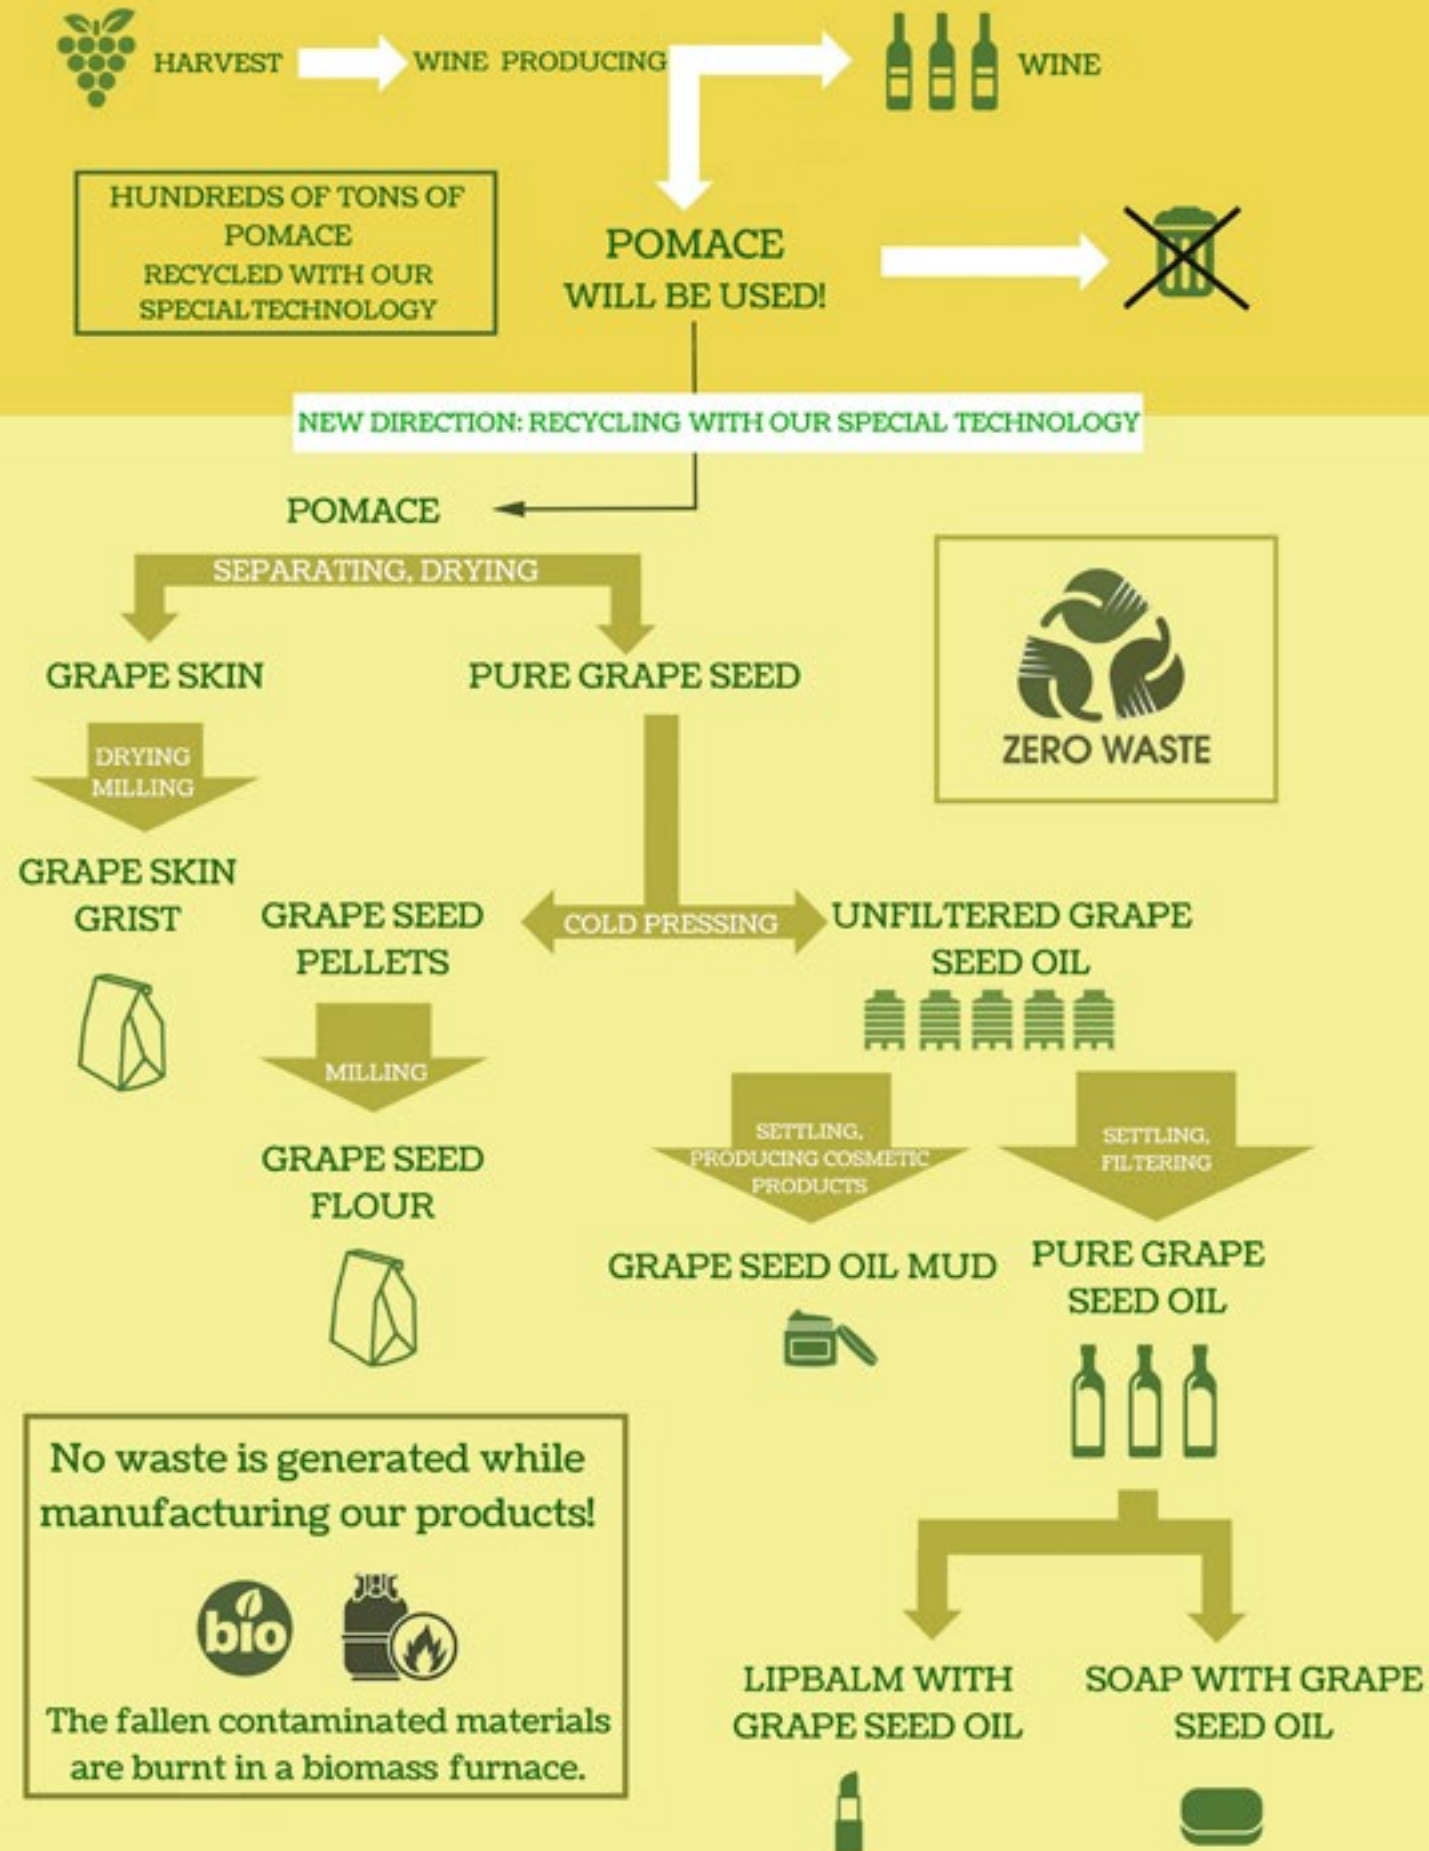

We process **all parts** of the raw material we receive.

Our products are mainly used for **food**, but are also ideal as **animal feed** as well as for **cosmetic purposes**.

## GRAPE SEED PRODUCTS FROM BY-PRODUCT OF WINERIES

# ABOUT THE FACTORY

Biokontroll HU-ÖKO-01  
EU- mezőgazdaság

Our factory is in Püspökladány and has all the necessary food certification, and we can also manufacture **organic** products.

As we learned in the very beginning, only using **high-quality raw materials** can result in **high-quality products**.

In order to make a good seed oil we need to use fragrant, tasteful, clean and flawless seeds.

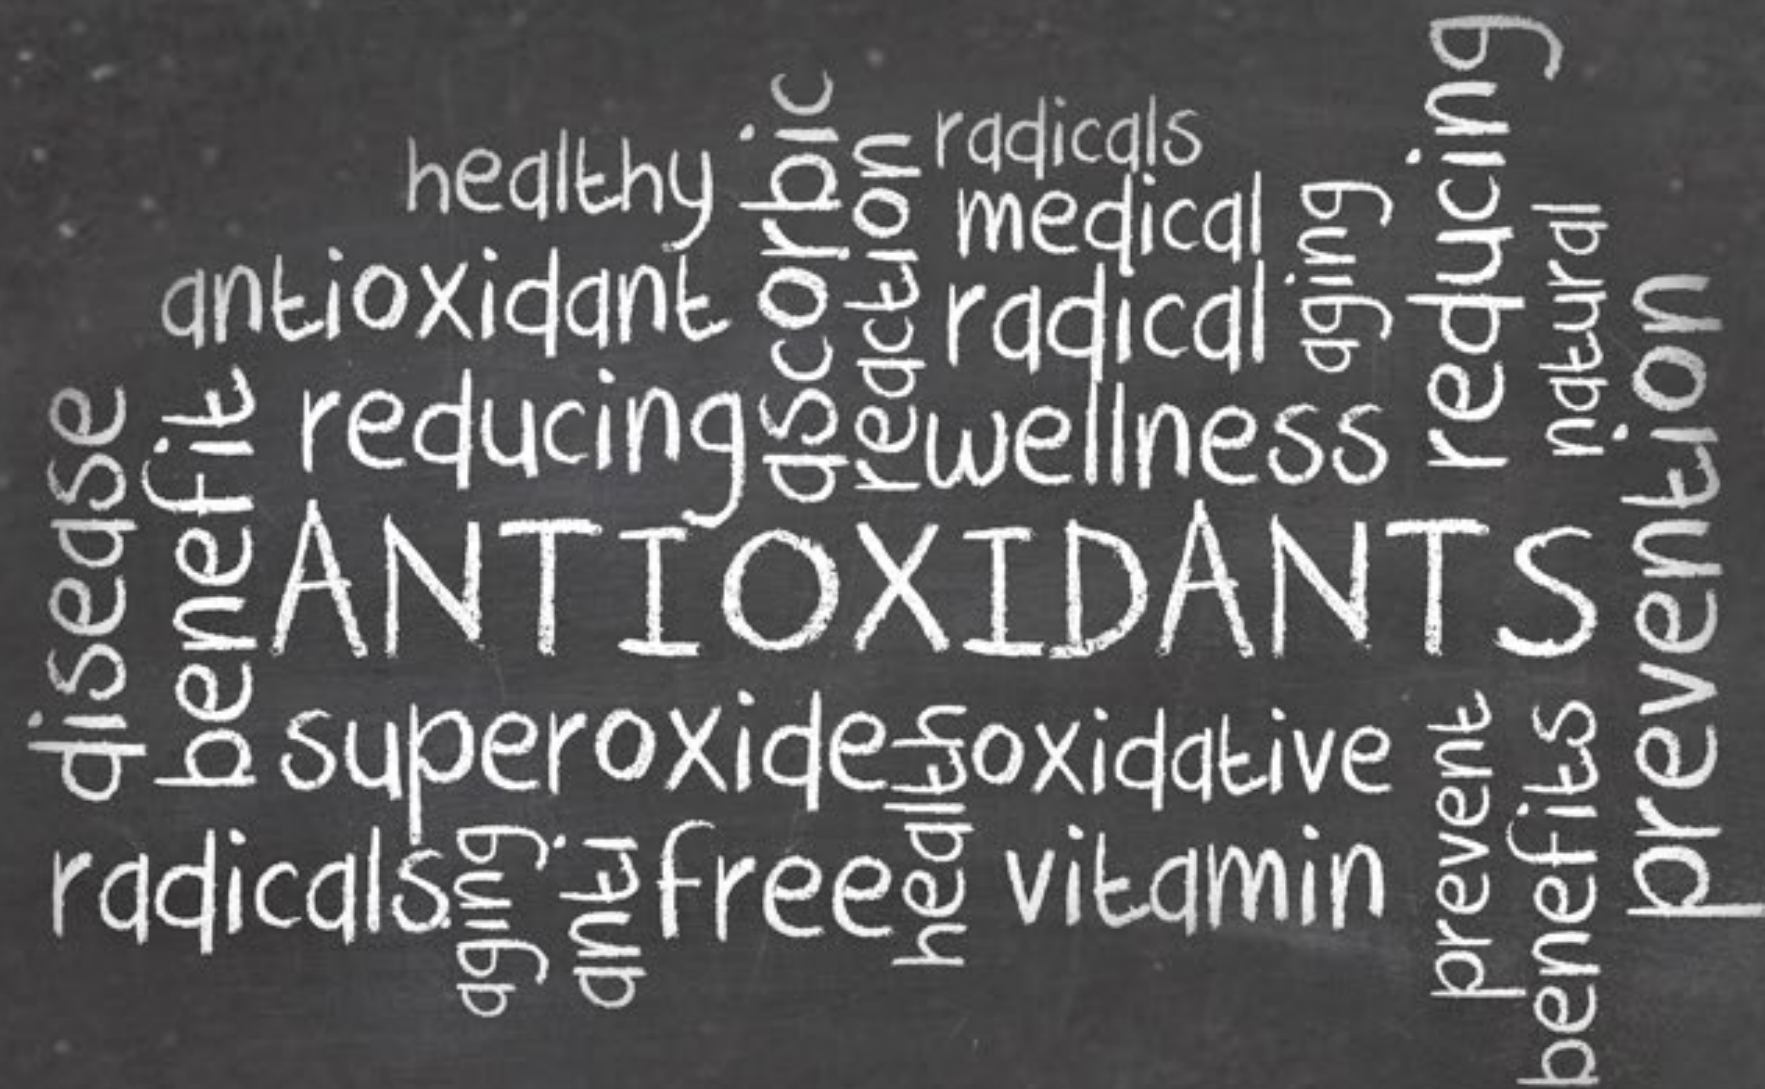

The incoming raw material is examined and subjected to **laboratory analysis.**

Using these results we can determine the cleanliness, the expected yield and the quality of the material.

Analysis is followed by **pressing and tasting.** If we are happy with the taste as well (we know this is what matters most to our customers), we start producing, filtering and bottling the oil.

# Cold pressed oils

We have 18 kinds of cold pressed oils.

Vegetable oils are extremely rich in **unsaturated fatty acids** and contain only a negligible amount of saturated fatty acids. They have also a high content of **essential fatty acids** (such as: Omega-3, Omega-6, Omega-9).

Essential fatty acids cannot be produced by our bodies but are **fundamental** for the functioning of the human body.

Another group of active ingredients in our oils are the **vitamins** that are essential for the human body. (the most important is the Vitamin E)

Vitamin E, due to its antioxidant effect, plays a key role in **protecting the immune system** against free radicals.

# Our oils

Linseed oil, pumpkin seed oil, poppy seed oil, walnut oil, corn oil, rosehip seed oil, aprikot kernel oil, black cumin seed oil, sea buckthorn seed oil, hempseed oil, sweet almond oil, milk thistle seed oil, mustard seed oil, sunflower oil, paprika seed oil, rape oil, sesame seed oil, grape seed oil...

# The flours (powder)

Our seed residues are really important byproducts for us. They are available in the form of pellet or grounded as flour.

# Creams / Muds

After cold pressing, we let the oils settle. This way we get the seed creams or the oil muds. Depending on whether it is **delicious or not**, we use it as a cream or as a cosmetic mud. Muds are **specially good for cosmetic use**, for example as a mask, because of its high Vitamin E content and scrubbing effect.

# OUR COSMETICS

**Muds, soap and lip balm**  
These are also made of our oils...

rosehip seed oil mud

sea buckthorn seed oil mud

milk thistle seed oil mud

linseed oil mud

grape seed oil mud

pumpkin seed oil mud

# Seeds

We have whole natural seeds too, like pumpkin seed, linseed, almond, walnut, sesame seed from our trustable Hungarian farmers...
